

FIREWALL II™

THE FUTURE OF FIREFIGHTING IS HERE

HELICOPTER WATER ENHANCER

FOR

AERIAL FIREFIGHTING TACTICAL SUPPORT

An agency and private cooperative effort for the advancement of aerial fire suppression effectiveness.

Objective: Increase firefighting success through the delivery of superior suppressant using mobile gel blending equipment for dip tank deployed on Initial Attack, Extended Attack and Large Fire Support.

Firewall II™ Blending System Highlights:

- Turnkey integrated gel-on demand system.
- Replaces high-cost retardant with very effective lower cost gel.
- Delivers a superior, thicker more effective suppressant compared to water or foam.
- Simple billing system: price per finished gallon.
- The only Water Enhancer Gel approved for use in fixed-tank helicopters at multiple viscosities.
- Non-corrosive blended gel.
- Very low toxicity values.
- Viscosity can be easily changed providing new firefighting flexibility.

THE PUNCH

The punch is the extra amount of water that Firewall II can place and hold on the flaming fire perimeter and adjacent fuels. It can absorb and overcome levels of heat attack that water and foam cannot.

With most fires being fought in the direct attack mode, Firewall II offers increased certainty of knockdown from single applications and the ability to directly take on greater fire intensities than possible with water or foam.

Direct Attack Punch
